

Euler circuit? $\Rightarrow$ Starting == Ending path

Euler path: If there is a graph, if you can visit each edge exactly once, then it is called Euler path

Euler circuit

Euler path
Euler circuit

Euler circuit

Euler path
Euler circuit

① Euler circuit: ① Every node in the graph should have even degree

② All the edges in the graph should be part of single component

Euler path

② Exactly 0 or 2 nodes can have odd degree, rest of all the nodes should have even.

②
